

RISK MANAGEMENT SERVICE OFFERING

East African Aviation

BETTER AVIATION

RISK MANAGEMENT

Why the need for better aviation risk management?

East Africa's aviation sector continues to grow, but it operates across a complex and uneven risk landscape: remote operating locations, variable airfield security standards, limited search-and-rescue coverage in places, and evolving geopolitical and criminal threats. These conditions increase loss frequency and severity, elevate premiums, and contribute to avoidable aircraft write-offs.

Stone Africa's Aviation Service Offering is designed for aircraft operators, regional brokers, London placing partners and underwriters who need decision-ready intelligence, auditable risk controls, and a credible on-the-ground capability before, during and after incidents. We deliver this through a 24/7 Integrated Operations Centre (IOC) in Nairobi, combining intelligence fusion, monitoring, escalation management and crisis coordination.

This delivers for operators and insurers:

- **Fewer surprises:** standardised risk assessments and route/airfield insights that translate into clear go/no-go decisions
- **Lower loss severity:** faster, better-coordinated first-hour actions, and assured access/logistics for recovery and investigation
- **Audit-ready evidence:** logs, escalation timelines, and exercise records that support SMS oversight and insurance renewal positioning
- **Scalable structure:** modular services that can be adopted per operator, embedded through brokers/insurers, or delivered as an integrated programme

How Stone Africa delivers this?

The offering is structured around three service lines, mirroring our tourism product structure but tailored to aviation operators, brokers and insurers. Services can be purchased ad hoc or combined into a comprehensive East African Aviation Risk Management (EARM) programme.

1. Risk assessments and the East African Aviation Risk Management dashboard

We provide aviation-specific threat and operational risk assessments for routes, destinations and regions—written for African operating realities (airspace risk, airfield security, political volatility, infrastructure fragility, and response limitations). Assessments are delivered as standalone products or as part of the EARM dashboard, which standardises grading and creates a shared decision-support layer for operators and market stakeholders.

What we provide

- Destination / airfield assessments using a consistent template and grading approach to support underwriting and operational decisions
- Route and corridor risk notes (incl. diversion posture, airspace constraints, NOTAM/security triggers, and escalation conditions)
- Regular (weekly/monthly) regional bulletins for agreed locations, focused on actionable change—not historical incident logs
- Integration with monitoring workflows so assessment outputs translate into triggers, watchlists and escalation ladders

How it is structured

- **Ad hoc:** one-off assessments for new routes, contracts, or specific destinations
- **Subscription:** agreed-country/route coverage with scheduled bulletins and alert thresholds
- **EARM dashboard:** consolidated view for operators and (where agreed) market partners, with role-based access and governance

2. Crisis management support (ERP readiness + post-incident logistics and recovery)

When an incident occurs, the first hours are often constrained by fragmented information and inconsistent escalation. Our crisis management offer is designed to reduce friction and contain loss: independent ERP assurance aligned to ICAO Annex 19 principles, tested escalation processes, and a Joint Operations Coordination Centre (JOCC) capability activated from our IOC. We also provide security and logistics support for incident access and aircraft recovery, reducing the likelihood of write-off.

a. ERP assurance and exercising

- ERP audit and gap analysis (ICAO Annex 19–aligned), including remediation roadmap and vendor network mapping
- ERP rewrite / enhancement: triggers, escalation ladders, notification templates, SITREP and incident log templates
- Tabletop exercises (TTX) and scenario-based exercises to test first-hour actions, communications discipline and stakeholder coordination

b. During incident: activation support

- JOCC stand-up from the IOC: incident logging, multi-agency liaison, SITREPs, tasking and coordination—freeing the operator to maintain routine flight operations
- Information management and documentation discipline to support claims, regulatory reporting and post-event review
- Crisis communications support (holding statements, stakeholder scripts) aligned to the operator’s plan

c. Post-incident: recovery and enabling

- Security and logistics enabling for adjustors/assessors/engineering teams: movement, access permissions, accommodation, and local liaison
- On-the-ground oversight to preserve evidence, protect assets and manage contractors
- Recovery planning support (road/river/airlift concepts as required) with clear risk controls and documentation

d. How it is structured

- Operator-led: ERP packages purchased directly, with outputs used to demonstrate readiness and support premium-credit discussions
- Insurer-embedded: ERP and response capability included as a policy endorsement, supporting differentiation and loss-ratio protection

3. Operations Control Centre (OCC) support (flight following and monitoring)

Many small-to-medium operators do not maintain a dedicated 24/7 OCC. Stone Africa provides a contracted OCC support model—flight monitoring and coordination support—while keeping operational control and accountability with the operator and Pilot-in-Command. This aligns with ICAO’s emphasis on effective operational control and flight monitoring, and is designed to strengthen escalation discipline and audit readiness under regulatory oversight.

Core OCC functions

- Flight monitoring / flight following using satellite-based tracking (e.g., Spidertracks) and operator-approved parallel systems
- Monitoring of operationally relevant weather and NOTAMs; structured escalation for loss of reporting, deviations, diversions and emergencies
- Centralised communications and information relay, with clear boundary: no ATC, no operational clearances, no dispatch authority unless specifically approved
- Audit-ready logs: alert history, acknowledgements, escalation timelines and flight history replay to support SMS and post-event review

How it is structured

- Per-aircraft subscription tiers (basic monitoring → enhanced → 24/7 monitoring), with standard onboarding packs and operator-specific escalation matrices
- Pilot phase (1–2 operators) → scale-out using standardised procedures and governance
- Optional modules: onboarding support, monitoring summaries, safety trend snapshots, drills and vendor/contingency reference network

SERVICE COSTINGS

The information contained in this document constitutes the intellectual property of Stone Africa and is provided in strict confidence on a commercial basis. It may not be disclosed, reproduced, or shared beyond the intended recipient without prior written consent.

Many of Stone Africa's services are priced on a task-specific basis to allow for targeted operational capability specific to each requirement. Prices are exclusive of VAT where applicable.

1. Risk Assessments & Aviation Dashboard (Exclusive of 16% VAT)

Category (a)	Service (b)	Inclusions (c)	Daily Rate (USD) (d)
Risk Assessments/ Threat Assessments	Aviation- specific location risk assessments	Designed for operators and insurers to manage risk flying into higher threat areas Delivered and costed against time available Charged at consultant daily rate and Insight& Analysis support (where required)	<i>From \$600 per consultant day</i>
Aviation Dashboard	Access to proprietary East African aviation dashboard	Includes flight planning information and risk assessments against all East African airports and major airstrips Regularly updated risk assessments to ensure operators receive current threat picture	<i>Subscription based service Costings TBD</i>

2. Crisis Management Support (Exclusive of 16% VAT)

Category (a)	Service (b)	Inclusions (c)	Daily Rate (USD) (d)
ERP Assurance & Review	ERP Audit & Gap Analysis Report (ICAO Annex 19 Aligned) Vendor Mapping Matrix	Gap Analysis Report mapped to Annex 19/KCAA; Top-10 fixes (people/ process/ tech); remediation roadmap; interface map Vendor Coverage Map & Matrix (region/country/airfield), gap mitigation plan (secondary providers/contingency routing)	<i>\$3500 per review</i>
ERP Rewrite	Rewrite of updated ERP	Updated ERP (controlled version) including: First-Hour JOCC checklist; escalation ladders (L1–L4); regulator/insurer notice language; SITREP/decision/incident log templates; contact packs for base + priority out-stations	<i>\$1500 per re-write</i>
Tabletop Exercise/ Scenario Training Event	In-person, Stone Africa-led training session After Action Review	Review of ERP Crisis Management Team including role charters, training requirements, quick-reference guides etc TTX Used to test known weaknesses and priority assumptions Immediate debrief, with detailed AAR and corrective actions and owners/dates within 1 week	<i>From \$1500 for TTX and \$3500 for Scenario Training Event</i>
Crisis support & post incident recovery	Integrated operations room support to incident management & 24/7 capability Post-incident support to operators & insurers	Stone Africa management & co-ordination of crisis response activities Security & logistic support for aircraft recovery and deployment of personnel	<i>Priced on a case-specific basis</i>

3. Operations Control Centre (Exclusive of 16% VAT)

Category (a)	Service (b)	Inclusions (c)	Daily Rate (USD) (d)
Flight monitoring	Flight monitoring of domestic Kenyan flights Post-flight reporting	Flight tracking and monitoring, Operational coordination support, Weather and situational awareness monitoring, Incident and alert escalation, Operational logging and reporting	<i>Pricing to follow Charged on a per-flight or monthly subscription basis</i>
Daily Aviation Updates	Daily email with weather and NOTAMS updates relevant to Kenya and operator	Assured KCAA NOTAM updates	<i>Pricing to follow, charged on a monthly subscription basis</i>

Stone Africa's Integrated Operations Centre (IOC) supports tasks 24/7 across Africa

COMPANY PROFILE & RELEVANT EXPERIENCE

Operational Continuity with Regional Depth

Stone Africa is a Nairobi-based operations company providing secure movement, duty of care, and coordinated support across Africa's most complex environments. At the core of our capability is a 24/7 Integrated Operations Centre (IOC) delivering real-time tracking, intelligence fusion, escalation management, and crisis coordination.

We serve as a regional hub for organisations operating in fragile and high-risk settings, helping them move safely, monitor risks, and maintain continuity. Whether supporting government, corporate, tourism, or humanitarian actors, we deliver more than security and monitoring, we provide a structured platform for operational decision-making and response. Our approach combines technology, regional expertise, and local access. From journey tracking and local network reporting, through incident escalation and protective coordination our IOC enables client risk to be managed and opportunities seized.

An African Hub for Global-Standard Operations

Our IOC integrates land, air, and systems desks into a single command environment, leveraging GIS, AI, and on-the-ground information to support clients across sectors. Our team brings experience from the British Army, UN missions, and regional security firms, ensuring grounded, standards-driven delivery. Whether managing travel, aviation missions, or operational intelligence, we provide the platform and people to keep missions running securely and effectively. With regional expertise and tested local networks, we provide end-to-end support:

- Security risk assessments & trip-planning analysis
- Tailored security management plans aligned with duty of care standards
- Secure ground movement and logistics coordination
- Real-time incident escalation and crisis management

This combination of **technology, people, and process** ensures operations remain compliant, accountable, and effective—even in the most complex environments.

Group backing and regional reach.

Stone Africa is the operational arm within a broader group structure, giving extended reach and resilience across the region. We maintain active presence and partnerships across **Kenya, South Sudan, Uganda, Tanzania, Mauritius and the UAE**, combining regional depth with international standards to deliver trusted, field-ready solutions for government, diplomatic, commercial and humanitarian clients.

Relevant experience (selected, anonymised):

- **ERP review for leading East African air operator:** Comprehensive review of Emergency Response Processes for leading operator based out of Wilson Airport including priority areas for focus and comprehensive TTX with senior leadership
- **Sector-specific regional aviation risk assessments for leading East African air operator:** 24hr turnaround and then on-going reporting for leading air charter to inform go/no-go decision making and insurance premiums for flights into 10 Middle Eastern cities during US-Iran War in March 2026

KEY

PERSONNEL

LAWRENCE SCOTT MCINTYRE - DIRECTOR / FOUNDER

Lawrence, a Kenyan, brings over 15 years of international experience in the executive protection and risk advisory space. He has supported operational planning and duty of care frameworks for global organisations across 70 countries, including clients in technology, and high-risk sectors. Prior to Støne Africa, Lawrence was recruited by the Alibaba Group to serve as Director of International Security. In this role, he built and expanded the board-mandated executive protection programme, supporting the global travel and security needs of the company's C-suite, founders, and their families. Lawrence went on to co-found the Støne Group and build out its subsidiary, Støne Africa, with a focus on the African continent.

ALEX BROWN - CEO

Prior to Støne Africa, Alex served as an officer in the British Army (Gurkhas) for 15 years and then as a consultant at the Boston Consulting Group (BCG). Within the military, Alex led operations in Africa, the Middle East, and Afghanistan, with extensive work in the Levant, including 3 years leading the UK team tasked with reforming the Jordanian Special Forces. He has advised government agencies on regional security and worked on strategic projects across multiple sectors at BCG in London. Alex has operated in Africa periodically for the last 18 years, including extensive time in Mali and East Africa.

TED HEATHFIELD - DIRECTOR OF PROTECTIVE SERVICES

Ted is a security and risk management professional and co-founder of Støne Group, with over 25 years global experience across Africa, the Middle East, and Asia. A British Army veteran, he has directed executive protection and security operations for the UK Foreign Office, Technip FMC in Equatorial Guinea, Omega AS in Angola, and multiple international mining, government, and technology clients throughout Sub-Saharan and West Africa. His expertise spans resilience planning, crisis response, and strategic risk mitigation in complex, high-threat environments.

JONTY VAN ZELLER - DIRECTOR / FOUNDER

Jonty is the founder of Alamaya, an intermediary and local delivery partner group with entities in 5 African countries, supporting businesses and governments to operate effectively across East and Central Africa. The group's portfolio has included delivering task orders under U.S. Department of State programmes such as Africa Peacekeeping Program (AFRICAP), supporting U.S. Foreign Military Sales (FMS) programmes, conducting due diligence and compliance assessments for international investors targeting the region, providing training for United Nations field operations in locations such as the White Nile, and implementing UAV programmes for government agencies. Active in the region since 2012, Jonty previously held management roles with the World Food Programme (WFP) during the Ebola Virus Disease response and supported KBR corporate across Africa. He currently serves on the Board of the UN Global Compact Network Kenya and as the Africa Lead for the International Stability Operations Association (ISOA).

LEWIS MWENDA - GENERAL MANAGER

Lewis leads Støne Africa's Integrated Operations Centre (IOC), overseeing land and air operations as well as insights and analysis reporting. He has extensive regional security experience across Kenya, Tanzania, Ethiopia, Uganda, the DRC, and Ghana. His background combines operational leadership with intelligence and analysis in roles at Control Risks and Salama Fikira, giving him a dual lens from field execution to executive-level insight. Lewis holds an Erasmus Mundus master's (IMSISS) and a BA (Hons) in International Relations & Security Studies.

LUKA ZORENČ - DIRECTOR OF TRAINING

Luka has over a decade of operational experience in both high-risk and peacetime settings providing risk management and training support to a diverse range of clientele globally. After completing a successful career in the Slovenian military as a Special Forces combat medic, Luka established himself in the private sector as an instructor, specialising in tactical and civilian medical training. Notable assignments have taken him to West, East, and Southern Africa. Luka, a co-founder of Støne Group, now leads Støne Africa's internal training arm, with an emphasis on skills proficiency and leadership in the protective services space.
